CartCompare - USER STORY

USER STORY
As a customer, I want to search for a product by name or keyword, so that I can quickly find what I need.
As a customer, I want to select my delivery location, so that I can see location-specific prices and availability.
As a customer, I want to see the current product price on each platform, so that I can identify the cheapest option.
As an admin, I want to manage the list of supported shopping platforms, so that the application compares only valid sources.
As an admin, I want to manage product categories and attributes, so that products can be organized consistently across platforms.
POINTS
As a customer, I want to see the same product across multiple shopping platforms, so that I can compare prices in one place.
As a customer, I want to see brand, quantity, and pack size, so that I can compare equivalent products fairly.
As a customer, I want to see discounts, coupons, and offers, so that I can find the most economical deal.
As a customer, I want to see product availability and estimated delivery information, so that I can choose an option that suits my needs.
As a customer, I want to open the selected product on the original platform, so that I can complete my purchase there.
POINTS
As a customer, I want to see delivery charges and minimum-order conditions, so that I can compare the actual purchase cost.
As a customer, I want the application to calculate the final payable amount, so that I know the actual amount I may spend.
As a customer, I want to sort and filter comparison results, so that I can quickly narrow down the best options.
As a customer, I want to save frequently purchased products, so that I can monitor them without searching again.
As an admin, I want to monitor failed or outdated price updates, so that unreliable comparison data can be identified and resolved.
POINTS
As an admin, I want to review incorrect or duplicate product matches, so that customers receive accurate comparisons.
As a price analyst, I want to view price trends across platforms, so that I can identify pricing patterns and market changes.
As a price analyst, I want to compare platform-wise discounts and pricing strategies, so that I can evaluate where customers get better deals.
As a data manager, I want to monitor the freshness of product and price data, so that outdated information does not affect comparisons.
As a system administrator, I want to monitor application errors and data-source failures, so that critical issues can be detected and resolved quickly.

POINTS
As a price analyst, I want to identify frequently price-changing products, so that important products can be monitored more closely.
As a price analyst, I want to view historical price data, so that I can study changes over time and generate useful insights.
As a data manager, I want to configure data-source update schedules, so that prices and availability are refreshed regularly.
As a customer, I want to receive a price-drop alert for a saved product, so that I can purchase it when the price becomes attractive.
As a customer, I want the application to recommend the best overall deal using price, quantity, discount, delivery cost, and availability, so that I can make the best purchase decision.
